

Abstract

Ice-fishing tip-ups which comprise a support structure, an upright, a band, a spool, a spring, an eyelet, a cut slot, a plastic wind device, a pin, a barrel swivel and a flag signal device consisting of two weights, two pins, and fishing line. Said line is threaded through said eyelet and connected to said flag end with said barrel swivel connected to line. When tip-up is set for catching fish, line is pulled, visual flag signaling device is triggered said weights falling forward. Line to said barrel swivel is then dropped, falling to ice hole with no tension on said line, approximately two feet. When line is tightened, spool then rotates freely against slight spring tension on spool turning on said pin.

Windjammer ice-fishing tip-up
